EDUCATION

Ontario Tech University **Oshawa, Ontario**

*Bachelor of Science in **Computer Science** | Minors: **Mathematics, Astronomy*** *Graduating December 2027*

- **GPA:** 3.65, *President's List*
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Algorithm Design & Analysis

EXPERIENCE

Software Developer Co-op **Darlington, Ontario**

Ontario Power Generation *September 2026 – Present*

- Built a full-stack Angular/ASP.NET Core tablet app for nuclear operators, digitizing paper logs into SQL Server and cutting data entry time by 42% while making shift records instantly searchable for supervisors
- Automated vendor procurement workflows by integrating real-time SQL dashboard metrics to trigger inventory restocking when supplies fall below thresholds
- Reduced query times across 4 SQL Server databases from 21s to under 4s on 1M+ records by rewriting queries
- Shipped a bookmarking feature for the issue tracker, used by 20+ engineers, with SQL Server persistence

Founder & Software Engineer **Toronto, Ontario**

Ghostless - Automated Job Discovery Platform *September 2026 – Present*

- Designed an automated Python pipeline discovering 17,000+ job boards through parallel crawling and 4-shard GitHub Actions workflows
- Optimized PostgreSQL data ingestion with fingerprint-based change detection, reducing nightly read volumes by 92%
- Developed a Next.js/FastAPI platform with OAuth and application tracking, serving 100,000+ active job postings
- Increased resume-matching precision from 45% to 93% on a blind-labeled dataset using a deterministic scoring engine

Software Developer Co-op **Toronto, Ontario**

Ontario Public Service – GovTechON *May 2026 – August 2026*

- Automated SharePoint REST API integrations using Python across 5 teams, building scripts to retrieve JSON payloads and rigorously validate data against expected schemas
- Automated reporting pipelines to convert raw JSON into formatted slide decks using Python, saving 7 hours weekly

Software Engineer **Remote**

Square Root Technologies *December 2025 – March 2026*

- Designed a Node.js pipeline using Gemini 2.5 Flash to process 100+ product listings per hour and extract structured data from 200+ source documents
- Engineered an automated validation pipeline across 50+ product categories, achieving 94% data extraction accuracy

Software Developer Co-op **Oshawa, Ontario**

Ontario Public Service – MPBSDP *May 2025 – December 2025*

- Implemented a Python and DevOps automation framework, reducing validation time by 30% across workflows
- Diagnosed and resolved 50+ data integrity issues via Azure DevOps, collaborating with vendors to eliminate bugs

PROJECTS

CodeImpact | GitHub **Next.js, FastAPI, Python, TypeScript, Tree-sitter, PostgreSQL**

AI-Powered Code Impact Analysis Platform *October 2026 – Present*

- Engineered a Next.js/FastAPI tool with a Tree-sitter static-analysis pipeline to evaluate PRs, resolve cross-file dependencies, and deterministically rank code impact to recommend relevant tests
- Developed a secure AI engine benchmarked on 100+ PRs, achieving 91% test recall, 60% suite reduction, 2.1s latency, and 97% evidence-grounding without executing untrusted repository code
- Designed an AI-assisted explanation engine that surfaces inspectable dependency provenance and confidence scores, significantly enhancing developer trust in automated PR recommendations

SKILLS

- **Languages:** Python, C#, TypeScript, JavaScript, Java, C++, C, SQL
- **Frameworks:** Angular, React, ASP.NET Core, Node.js, Express, Flask
- **Databases:** SQL Server, PostgreSQL, MySQL, MongoDB, SQLite
- **Tools:** Git, Azure DevOps, Docker, GCP, Power BI, Power Apps, Power Automate
