EDUCATION

Ontario Tech University

Oshawa, Ontario

Bachelor of Science in **Computer Science** | Minors: **Mathematics, Astronomy**

Graduating December 2027

- **GPA:** 3.65, *President's List*
- **Relevant Coursework:** Database Systems, Software Design & Analysis, Software Quality Assurance, Algorithms & Design

EXPERIENCE

Co-op Student, Software & Data Analytics

Darlington, Ontario

Ontario Power Generation

September 2026 – April 2027

- Develop internal web applications using **Angular** and **ASP.NET Core Web API** to support Operations workflows
- Build and maintain **Power BI** dashboards used by 50–100 Operations staff to monitor key metrics and support management decision-making
- Develop **SQL** queries and data workflows to integrate operational data into internal applications and reporting solutions
- Build **PowerApps** solutions to streamline internal workflows and improve access to operational data

Data Analyst Co-op

Toronto, Ontario

Ontario Public Service – MPBSDP

May 2026 – August 2026

- Develop **Power BI** dashboards tracking 10+ KPIs for CIO's Office business development and consulting initiatives
- Analyze datasets with **SQL** and **Excel** across 5+ projects, identifying trends and data quality issues to inform business decisions
- Partner with stakeholders to deliver **15+ analytical reports** informing digital service delivery decisions across teams

Software Engineer

Remote

Square Root Technologies

December 2025 – March 2026

- Built AI pipeline (Node.js, **Ollama/Mistral**) to generate Amazon-style product pages from raw deal data, processing 100+ listings per hour
- Implemented **NLP models** to extract and structure data from 200+ source documents (PDFs, Excel, emails), improving consistency for downstream processes
- Validated pipeline across **50+** product categories, achieving **90%** accuracy rate for production e-commerce deployment

Software Developer Co-op

Oshawa, Ontario

Ontario Public Service – MPBSDP

May 2025 – December 2025

- Built automated QA framework using Python and Azure DevOps, reducing validation time by 30% across tax remittance workflows used by 25+ team members
- Identified and tracked **50+** data integrity issues using DevOps, driving vendor resolution of **100%** of identified bugs
- Documented **10+** workflow requirements through team analysis, supporting implementation of system enhancements

PROJECTS

AI Product Pipeline | [GitHub](#)

Node.js, Express, Gemini 2.5 (Vision + Image), mailparser, Multer, Pino

Full Stack Application

March 2026

- Built a Node.js/Express API that parses .eml files and extracts structured product data from email text and inline images using Gemini vision, returning a validated JSON schema with apparel variant logic
- Added a vision-to-image stage that describes product photos via Gemini, then regenerates them as studio shots

CampusConnect AI | [GitHub](#)

React & Flask, Python, SentenceTransformers, Ollama, REST APIs

Full Stack Application

March 2025

- Built a hybrid AI chatbot for the University Test Centre combining semantic search with LLM fallback
- Used vector-based intent routing (SentenceTransformers) to improve answer accuracy over keyword matching

SKILLS

- **Programming:** Python, JavaScript, TypeScript, Java, C++, C, SQL, R
- **Data & Analytics:** Power BI, Excel, Power Automate, ggplot2, dplyr, Data Visualization, scikit-learn
- **Frameworks & Tools:** Angular, React, Node.js, ASP.NET, Flask, PowerApps, Power BI, Git, Docker, Azure DevOps, GCP
- **Databases & Concepts:** PostgreSQL, MySQL, MongoDB, SQLite, REST APIs, CI/CD, Agile
